Fri, 15 Dec 2017 21:02:00 GMT Identification of Nonlinear Systems - EOLSS - A (mathematical) model of the system is a mathematical relationship that relates the output to past inputs and out-puts. For a system with (stochastic) disturbances only the predicted output $\hat{y}(t)$ can obey such an exact relationship. $\hat{y}(t) = \tilde{g}(y(t-1); u(t-1); y(t-2); u(t-2); \dots)$ (1) The model is nonlinear if the function \tilde{g} is nonlinear. Wed, 17 Jan 2018 02:15:00 GMT Approaches to Identification of Nonlinear Systems - System identification, or mathematical modeling, is the process of developing or improving a mathematical representation of a physical system based on observed data.
